IN PLAIN WORDS
- Sports is 89% of all trading in the last 24 hours, with 67,179 open markets.
- After that, the busiest are Elections, Crypto, Climate and Weather.
- 6 categories traded fewer than 1,000 contracts today. Thin markets are hard to get in and out of.
- Volume shows where prices are most reliable and fills are easiest, not where the best bets are.

IN PLAIN WORDS
- 102 of the screened books lean at least 50% to one side; the top 10 are listed.
- YES BIDS and NO BIDS are the dollars waiting to buy each side within a few cents of the best price. More dollars bidding for YES means more people willing to pay up for YES than for NO.
- In 7 of these, a single order is half or more of the resting money (the 1 ORDER column, in yellow). One order can be cancelled in a second, so weigh those less.
- Resting orders are intentions, not trades. Run `flow N` to see whether takers are actually trading the same way.

IN PLAIN WORDS

- POOL is the money Kalshi has set aside for that market for one period (PER). It is shared among everyone who qualifies, so your part is a fraction of it, and often a small one.
- A liquidity program rewards limit orders resting near the best price, up to the TARGET size in contracts. A volume program rewards trading. The exact rules are Kalshi's; read them before counting on a payout.
- The risk is real: an order that rests is an order that can be filled just as news breaks against it. Wide-spread, quiet markets pay the most per competitor and are also the easiest to get picked off in.
- 24 more programs are on markets that are not in the saved list of open markets.
- LEFT is how long this period has to run. `--by quiet` sorts by pool size against how much trades there.

Next: **analyze 1 --deep** **sources 1** **buy 1 --side yes --price N --count N** (post-only by default, which is what a resting order

needs)

(prices as of 17 min ago; add --refresh before the command for live prices, or use `show TICKER`)

IN PLAIN WORDS
- 1 price sets break arithmetic after fees. The largest is worth 0.5c per set on paper.
- On paper is the catch: these are usually a few contracts deep and gone in seconds. Check the size with `show`.
- 4 markets moved at least 2.5 times their normal day. A move that big usually means news; read it before assuming the market overreacted.
- Prices here come from the saved list. Put --refresh before the command for a fresh one.

(prices as of 17 min ago; add --refresh before the command for live prices, or use `show TICKER`)

BASKET 5 positions, $47.83 at risk (9.6% of a $500 bankroll, 2% each)

IF...	CHANCE UP	AVERAGE	TYPICAL	BAD 5%	GOOD 5%
the bias pattern holds (EST)	42%	+$0.39	-$1.83	-$17.83	+$12.17
the market price is right (MKT)	42%	-$0.08	-$1.83	-$17.83	+$12.17

Chance every pick wins: 37%. One loss at these prices can wipe out several wins.

READ THIS
EST is the price plus a small nudge for a known pricing pattern. It is an assumption, not a forecast.
If the market price is simply right, the average result is zero or a little worse, as the table shows.
These are candidates to research. The guide's rule still stands: trade only when YOUR number
differs from the price by 5 points or more. "limit" orders may never fill.

	KXCPIYOY-26SEP-T3.4 Economics https://kalshi.com/markets/kxcpiyoy/x/kxcpiyoy-26sep					

The chain runs out at $14.39 after 8 wins, short of $40. It takes about 2d to play out.

STAKING PLANS 20,000 simulated runs of this chain, aiming for $14.39

STAKE EACH STEP	REACH GOAL	END BELOW START	LOSE 75%+	AVERAGE END	TYPICAL END
100% of bankroll	69%	31%	31%	$10.09	$14.39 <- yours
50% of bankroll	0%	31%	0%	$10.04	$11.96
25% of bankroll	0%	31%	0%	$10.02	$10.75

IN PLAIN WORDS

- Each step wins about 95% of the time, but all 8 in a row happens only 69% of the time.
- Going from $10 to $14.39 is a 1.4x gain. At fair prices a 1.4x gain can succeed at most 70% of the time. Chaining favorites does not beat that; it only hides it.
- If the market prices are simply right, staking 100% ends at $9.34 on average, below the $10 you started with, because every step pays the taker fee.
- Smaller stakes survive a loss but reach the goal less often with this many steps. Pick the row whose worst case you can live with.
- This is the guide's high-price zone, where contracts have been slightly underpriced on average. That is a small edge, and one loss at these prices erases many wins.

IN PLAIN WORDS
- A 2x means risking $10 to get $20.00. If prices are fair that works 50% of the time, and fails the other 50%, whichever route is used.
- Highest estimated chance here: single, about 47%. The differences between routes are small and come from the price-bias assumption, not from knowing the outcomes.
- The chain has the likeliest individual bets, but one miss ends it. Later legs are sized from today's prices and will have moved by the time you get there, so re-run before each one.
- The spread assumes its markets are unrelated. If they hang on the same news they win or lose together, and the real chance is lower than shown.
- AVG RESULT is the average gain or loss per attempt under the tool's estimate. Under plain market prices it is always a small loss, because every route pays the taker fee.

```

- The spread assumes its markets are unrelated. If they hang on the same news they win or lose together, and the real chance is lower than shown.
- Some of these are under 15 cents. That is the guide's longshot zone, where buyers have lost the most on average.
- These need up to 1,009 contracts at the ask. Check there is that much for sale with `analyze N --deep` before sending anything.
- AVG RESULT is the average gain or loss per attempt under the tool's estimate. Under plain market prices it is always a small loss, because every route pays the taker fee.

BASKET 5 positions, $47.81 at risk (9.6% of a $500 bankroll, 2% each)

IF...	CHANCE UP	AVERAGE	TYPICAL	BAD 5%	GOOD 5%
the bias pattern holds (EST)	45%	+$0.51	-$1.81	-$15.81	+$9.19
the market price is right (MKT)	42%	-$0.13	-$1.81	-$15.81	+$9.19

Chance every pick wins: 45%. One loss at these prices can wipe out several wins.

READ THIS
EST is the price plus a small nudge for a known pricing pattern. It is an assumption, not a forecast.
If the market price is simply right, the average result is zero or a little worse, as the table shows.
These are candidates to research. The guide's rule still stands: trade only when YOUR number
differs from the price by 5 points or more. "limit" orders may never fill.

Next: **show 1** **analyze 1** **brief 1** **plan 1 --my-prob N** **buy 1** (a dry run until you add --live)

YES 12% NO 88%

SIDE	BID	ASK	PAYS	FEE	BREAK-EVEN
YES	11c	**14c**	7.14x	0.84c	needs to be **14.8%+** likely (market order)
NO	86c	**89c**	1.12x	0.69c	needs to be **89.7%+** likely (market order)

last trade **14c** (no change) spread 3c 24h volume **6.5k** open interest 4.2k

IN PLAIN WORDS
- The market puts YES at about 12%.
- $10 on YES at 14c buys 71 contracts and returns $71 if YES wins.
- The 3c gap leaves room to rest a limit order between the bid and the ask.

RULES
If average regular gas prices for United States are strictly greater than $4.3600 on Oct 12, 2026 according to AAA, then the market resolves to Yes.

ORDER BOOK best 5 resting bids per side

YES PRICE cents

STATISTICS

Start to now	4c to **13c**	**+9c**
Range	4c to 13c	average 9.6c now at 100% of the range
Typical move per hour	1.6c	biggest +5c (Oct 11 09:00)
Trend	+2.10c per hour	up 4 hours, down 0, flat 0
Volume	6.5k total	1.3k per hour last 3 hours running at 2.6x the earlier pace
Open interest	289 to 4.1k	
Room to wander	about +/-5c over the 11 hours left	(typical move x square root of time; a scale, not a forecast)

IN PLAIN WORDS

- The YES price has risen 9c over 5 hours and sits near the top of its range.
- It is moderately active: a typical hour moves it 1.6c, and the biggest single move was +5c.
- Trading has picked up sharply lately (2.6x the earlier pace).
- Buying YES now at 14c only pays off if YES is at least 14.8% likely. A past trend says nothing about that.
- Against the guide: price is in the 60-95c band, closes within 30 days.

IN PLAIN WORDS
- The market's favorite is "Above 4.3200" at about 99%.
- Next is "Above 4.3250" at about 99%.
- 8 of the 17 outcomes are priced at 5c or less.

PS> **python kalshi_cli.py ladder KXAAAGASD-26OCT12**

KALSHI **implied distribution**

US gas prices tomorrow Economics
https://kalshi.com/markets/kxaaagasd/x/kxaaagasd-26oct12

OUTCOME	CHANCE
below 4.32	1.0%
4.32 to 4.325	0.0%
4.325 to 4.33	0.0%
4.33 to 4.335	0.0%
4.335 to 4.34	0.0%
4.34 to 4.345	0.0%
4.345 to 4.35	6.0%
4.35 to 4.355	47.0%
4.355 to 4.36	33.5%
4.36 to 4.365	11.0%
4.365 to 4.37	0.5%
4.37 to 4.375	0.5%
4.375 to 4.38	0.0%
4.38 to 4.385	0.0%
4.385 to 4.39	0.0%
4.39 to 4.395	0.0%
4.395 to 4.4	0.0%
above 4.4	0.5%

Implied median **4.35** Implied average about 4.36

IN PLAIN WORDS
- The market's central guess is about 4.35: half the money says higher, half says lower.
- The single most likely outcome is "4.35 to 4.355" at 47%.
- The ladder is in order: every higher threshold is priced at or below the one before it.

Next: **event KXAAAGASD-26OCT12** **show 1**

PS> **python kalshi_cli.py plan KXAAAGASD-26OCT12-4.3600 --my-prob 12 --bankroll 500** no --my-prob given, so this uses the market's own price: expect no edge

KALSHI **trade plan**

US gas prices tomorrow [Above 4.3600]
KXAAAGASD-26OCT12-4.3600 Economics ends in **10h**
your probability of YES: **12%** market: YES 11/14c NO 86/89c

#	ORDER	HOW	WIN %	EDGE	RETURN	IF 5 OFF	KELLY	SIZE	CONTRACTS	COST
1	**NO @ 87c**	limit	88%	**+1.0c**	+1.1%	-4.0c	7.7%	1.9%	11	$9.57
2	**YES @ 12c**	limit	12%	**+0.0c**	+0.0%	-5.0c	0.0%	0.0%	0	$0.00
3	**NO @ 89c**	take	88%	**-1.7c**	-1.9%	-6.7c	0.0%	0.0%	0	$0.00
4	**YES @ 14c**	take	12%	**-2.8c**	-19.2%	-7.8c	0.0%	0.0%	0	$0.00

KELLY is the full Kelly share of bankroll. SIZE is 0.25 of that, capped at 3% of your $500 bankroll. "limit" may never fill.

CHECKLIST for option 1: NO @ 87c
FAIL edge of 5 points or more (yours: +1.0)
PASS price at 15c or more (this: 87c)
FAIL still positive if your probability is 5 points too confident
PASS resolves within 30 days (this: 10h)
PASS can be entered with a limit order, no fee
PASS enough trading to get filled (6.5k contracts in 24h)

VERDICT **SKIP** (4 of 6 checks pass)

IN PLAIN WORDS
- You think NO wins 88% of the time and can get in at 87c, so each contract is worth 1.0c more than it costs, if you are right.
- If your number is 5 points too confident, the edge becomes -4.0c. It depends on you being right.
- The suggested 11 contracts risk $9.57 to make $1.43, with an expected profit of $0.11.
- Everything here follows from YOUR probability. The script cannot tell you whether it is right.

KXAAAGASD-26OCT12-4.3600 now: NO bid 86c / ask 89c

BUY 11 NO @ 87c limit order, good till cancelled
cost **$9.57** fee $0.00 while it rests pays **$11.00** if NO wins max loss $9.57
WARNING No --my-prob given, so your edge was not checked.

DRY RUN Nothing was sent. This is what --live would send:
POST /portfolio/events/orders {"ticker": "KXAAAGASD-26OCT12-4.3600", "side": "ask", "count": "11", "price": "0.1300", "time_in_force": "good_till_canceled", "self_trade_prevention_type": "taker_at_cross"}
(Kalshi quotes every order on the YES side: "bid" buys YES, "ask" sells YES; NO at P is YES at 100 - P.)

(row 1 of the last list = KXAAAGASD-26OCT12-4.3600)

PS> **python kalshi_cli.py brief KXAAAGASD-26OCT12-4.3600**

I am deciding whether to trade a prediction market and I want an independent probability estimate.
Today is October 11, 2026. Please search for current information; do not rely on memory for anything recent.

THE QUESTION
US gas prices tomorrow [Above 4.3600]

HOW IT RESOLVES (these exact rules decide the outcome, so read them literally)
If average regular gas prices for United States are strictly greater than $4.3600 on Oct 12, 2026 according to AAA, then the market resolves to Yes.

Resolution sources: AAA (https://gasprices.aaa.com/)
The market closes 2026-10-12T03:59:00Z (in 10h).

WHAT I NEED FROM YOU
1. Restate in one sentence exactly what has to happen for this to resolve YES, including any deadline or threshold. Point out anything in the rules that could make it resolve differently from the headline.
2. The base rate: how often has this kind of thing happened in comparable past cases? Say which cases.
3. The current evidence for and against, each item with its source and date. Prefer primary sources.
4. Your probability that this resolves YES, as a single number, plus a range you are 80% sure contains the truth. Show how you got from the base rate to that number.
5. What specific news between now and the close would move your number by 10 points or more?
6. How confident you are in the estimate itself, and what you could not find out.

Form your own estimate from the evidence BEFORE reading the next section.

FOR COMPARISON ONLY
The market currently prices YES at about 11c bid / 14c ask.
No price history is available.
After giving your estimate, say whether you disagree with the market by 5 points or more and, if so, the single strongest reason the market could be right and you wrong.

The morning run-through: watchlist, anomalies, top picks and your scorecard in one go.
4 **serve**
Open the dashboard at http://127.0.0.1:8765. Same commands, same output, with buttons.
5 **firehose --open**
Run EVERY command and bind the output into one color PDF with clickable contents, then open it.
6 **--refresh categories**
Put --refresh before any command to re-download the market list instead of using the saved copy.
7 **chain "search fed rate" "analyze 1" "flow 1"**
Three commands in a row. Row numbers carry over, so 1 means the first search result.
8 **chain "best 3 ; plan 1 --my-prob 70 ; buy 1" --keep-going**
One string with ; between steps. --keep-going carries on if a step fails.
9 **serve --browser edge**
Open the dashboard in Edge instead of Chrome. Also: firefox, brave, default, or a full path.
10 **--links never top --category economics**
Turn off clickable links for one run, for a terminal that shows stray characters.
11 **selftest**
Check the arithmetic and run about 30 real commands; each line says pass or FAIL. No order is sent.
12 **selftest --quick**
A shorter check: the arithmetic and the first ten commands.
13 **banner**
The banner and a short list of where to start. Running the tool with nothing after it shows the same.

FIND MARKETS

14 **top --category economics --top 10**
The 10 most traded economics markets in the last 24 hours.
15 **top --all --top 100**
The 100 busiest markets on the whole exchange.
16 **top --all --under 10 --top 20**
The 20 busiest contracts costing 10 cents or less. Longshots; the guide says to skip them.
17 **top --category politics elections --over 85 --top 15**
Heavy favorites (85 cents and up) in two categories at once.
18 **top --search fed rate --top 5**
Keyword search. A market must contain every word.
19 **top --search bitcoin ethereum --any-word --exclude daily**
Match either word, and drop anything containing 'daily'.

20 **top --skip-category sports crypto --top 20**
The busiest markets outside sports and crypto.
21 **top --preset movers --min-volume-24h 5000**
Biggest price changes since yesterday, in markets that actually trade.
22 **top --preset closing-soon --category weather**
Weather markets that resolve within two days.
23 **top --preset wide --top 10**
Bid-ask gaps of 5 to 20 cents with real volume: room to rest a limit order.
24 **top --preset guide --top 10**
Markets that fit the guide: 60 to 95 cents, resolving within 30 days, active.
25 **top --side no --min-price 60 --max-price 80 --closes-within 7**
NO contracts priced 60 to 80 cents that resolve this week.
26 **top --category tech ai --sort interest --one-per-event**
Tech and AI ranked by open interest, one market per event.
27 **top --series KXFED --sort closing**
Every market in one series, soonest first.
28 **top --category economics --top 3 --open 3**
Show the top 3 and open each one's kalshi.com page in your browser.
29 **search bears packers**
Every open market matching both words, in every category including sports, with no top-N cut. Also shows how the matches group into events.
30 **search bears packers --group**
The same search as a list of events with a market count each, instead of every market.
31 **search fed rate --any --limit 20**
Markets matching EITHER word, cut to the first 20.
32 **search rate cut --phrase --not september**
The exact phrase 'rate cut', leaving out anything that mentions September.
33 **search --regex "above \$?9[0-9]" --category commodities**
A pattern search: commodity markets with a threshold in the 90s.
34 **search --tag Fed --closes-within 30**
Everything Kalshi files under its own 'Fed' tag that closes within 30 days.
35 **search trump --in title --under 15 --sort volume**
Look only in the question text, keep contracts you can buy at 15c or less, busiest first.
36 **search CHIGB --count**
Just the number of matching markets and events. CHIGB is the code in the ticker for one game.
37 **search fed --tickers**
Only the tickers, one per line, for pasting or piping into something else.
38 **search weather --format csv --out weather_all.csv**
Every match written to a spreadsheet file.
39 **top --search fed --top 0**
The older way to get everything: --top 0 means no cut.
40 **tags**
The tags Kalshi files its markets under, by category. Use one with search --tag.
41 **sources KXFEDDECISION-26OCT-H0**
Where the answer comes from: the official settlement source, the contract terms, the fee type, and who may not trade it.
42 **status**

Is the exchange open, and is any maintenance scheduled.

LOOK CLOSER

43 **show KXFEDDECISION-26OCT-H0**
One market live: both sides, fee, break-even, rules and the order book.
44 **show 2**
The same for row 2 of whatever list you printed last. Row numbers work everywhere.
45 **show 2 --full-rules**
Include the secondary rules text. Read it before trading anything.
46 **event KXFEDDECISION-26OCT**
Every outcome in one event, with the prices added up.
47 **ladder KXFEDDECISION-26OCT**
The event as a probability distribution: fair odds with the margin removed, or the implied median for a threshold ladder.
48 **analyze KXFEDDECISION-26OCT-H0**
Fourteen days of price history as a chart, with range, typical move, trend and volume.
49 **analyze 1 --interval hour --days 3**
The same at hourly resolution for the last three days.
50 **analyze 1 --deep**
Drill all the way down: adds the order book depth and the last 15 trades with who was buying.
51 **analyze 1 --trades 40 --book**
Pick the drill-downs yourself: the last 40 trades and the book.
52 **watch KXFEDDECISION-26OCT-H0 --every 30**
Re-check every 30 seconds and print a line when the price moves. Ctrl+C stops it.
53 **open 1**
Open row 1's page on kalshi.com.

FIND AN EDGE

54 **anomalies**
Scan everything for prices that break arithmetic or break their own pattern.
55 **anomalies --type overround ladder**
Only the arithmetic breaks: outcome sets and threshold ladders that guarantee a profit on paper.
56 **anomalies --type move --checks 40**
Moves measured against each market's own normal day, checking the 40 biggest movers.
57 **anomalies --category economics weather --top 10**
Limit the scan to two categories and show 10 per section.
58 **--refresh anomalies --type surge dislocation**
Fresh prices, then volume surges and quotes that have left the last trade behind.
59 **best**
The single top-scoring market after the guide's screen.
60 **best 3**
The top three by score. Also: best 5, best 10.
61 **best 5 --category economics weather --bankroll 2500**
Top five inside two categories, sized for a $2,500 bankroll.
62 **best 5 --by odds**
The five with the best odds of winning, instead of the best score. Small payouts, high hit rate.
63 **best 5 --by soonest --closes-within 2**

The five that resolve first, so the money comes back quickly.

64 **grind --start 10 --target 40**

Chain likely winners to compound $10 toward $40, with the real odds of the whole chain.

65 **grind --start 10 --target 16 --stake 50 --closes-within 2**

A shorter climb, risking half the bankroll per step instead of all of it.

66 **grind --start 25 --target 100 --min-price 90 --skip-category**

Only 90c-and-up favorites, with sports and crypto included.

67 **multiply 2x --stake 10**

Ways to turn $10 into $20 within three days: one bet, a chain of bets, and a spread of bets, side by side with the odds of each.

68 **multiply 3x --stake 20**

The same for $20 into $60. The single bet is a contract near 33c; the chain is two or three likelier bets in a row.

69 **multiply 5x --stake 20 --days 5**

Aim for 5x and let the bets run up to five days out instead of the default three.

70 **multiply 10x --stake 100 --days 7**

$100 into $1,000 over the longest window allowed. Seven days is the ceiling; a bigger number is cut back to 7.

71 **multiply 5x --stake 10 --route single --top 10**

Only the one-bet route: the ten best contracts that pay 5x or a little more.

72 **multiply 3x --stake 20 --route multi --max-bets 4**

Only the several-bet routes, allowing up to four bets in the chain or the spread.

73 **multiply 2x --stake 100 --route chain --category weather economics**

A 2x built only from bets in a row, inside two categories.

74 **multiply --sweep**

Run 16 multiply variations in one go and write each command with its output to multiply_results.txt.

75 **multiply --sweep my_runs.txt**

The same sweep, written to a file name you choose.

76 **x 5x -s 20 -d 2 --format json --out multiply.json**

Short form of the command, with the bets written to a file for a spreadsheet or script.

77 **picks --top 10 --bankroll 500**

Ten picks as a weighted random draw from the best 60, one per event, with basket odds.

78 **picks --top 5 --seed 7**

Fix the random draw so the same five come back.

79 **picks --top 5 --bias 0**

Turn the pricing-pattern adjustment off: what the picks look like if the market is simply right.

80 **picks --top 8 --closes-within 3 --min-volume-24h 5000**

Only liquid markets that resolve within three days.

81 **flow**

The trade tape for the whole exchange: the busiest markets in the last 2,000 trades and which side takers are buying.

82 **flow KXFEDDECISION-26OCT-H0 --hours 24**

One market's tape for a day: taker lean, average price paid, time slices and the largest single trades.

83 **flow --search bears packers --since 12:00**

Every trade since noon (your local time) in the markets matching those words, side by side.

84 **flow --search CHIGB --since noon --markets 60 --by lean**

The same for 60 markets, most one-sided first.

85 **flow --by big --category politics elections**

Exchange-wide, only political markets, ordered by the largest single trade.

86 **flow 1 --since 2h --format json**
Row 1 of the last list, the last two hours, as JSON.
87 **pressure**
Order books that lean hard to one side among the 200 busiest markets, with a warning when one order is most of it.
88 **pressure --search fed --min-lean 0.3 --within 5**
The same check on markets matching a word, with a looser screen.
89 **rewards**
Markets where Kalshi currently pays a pool of money to traders with resting orders, biggest pool first.
90 **rewards --by quiet --category economics --top 30**
Reward pools sorted by pool size against how much trades there: the least competition per dollar.
91 **rewards --status upcoming**
Programs that have been announced and not started yet.

DECIDE
92 **brief KXFEDDECISION-26OCT-H0 --copy**
Write a research prompt for an AI assistant and copy it to the clipboard. Paste it, get a probability back.
93 **brief 1 --out research.txt**
Save the research prompt to a file instead.
94 **plan KXFEDDECISION-26OCT-H0 --my-prob 92 --bankroll 500**
Your probability in, edge, expected value, Kelly size, checklist and verdict out.
95 **plan 1 --my-prob 30 --bankroll 2500 --kelly 0.5 --max-risk 2**
Half Kelly instead of a quarter, capped at 2% of bankroll.
96 **fee --price 55 --contracts 100**
What a market order would cost in fees, and the break-even it implies.
97 **watchlist add KXFEDDECISION-26OCT-H0 --note "wait for CPI"**
Remember a market and the price you first saw.
98 **watchlist**
Your saved markets with live prices and the move since you added each.

TRADE
99 **buy 1**
After plan or picks: preview the suggested order for row 1. A dry run; nothing is sent.
100 **buy KXFEDDECISION-26OCT-H0 --side yes --price 83 --count 10 --my-prob 92 --bankroll 500**
Preview a specific limit order with the edge and sizing checks.
101 **buy 1 --spend 15**
Size by dollars instead of contracts.
102 **buy 1 --live**
Send it for real. Asks you to type BUY first. Needs your API key.
103 **--demo buy 1 --live**
The same against Kalshi's practice exchange, with practice money and a demo key.
104 **orders**
Orders still resting on the book.
105 **cancel ORDER_ID --live**
Cancel one resting order. Without --live it only shows what it would do.
106 **positions**
Cash balance and what you hold, with what each would fetch now.

107 **sell 1 --side yes --count 5 --price 66**
Preview selling 5 contracts of row 1 from positions. Checked against what you hold.

KEEP SCORE
108 **log init**
Create the trade log (trade_log.csv, or the path in KALSHI_LOG).
109 **log add --ticker KXFEDDECISION-26OCT-H0 --side yes --price 83 --contracts 10 --my-prob 92 --bankroll 500 --niche econ --rules-read --thesis "no hike signalled"**
Record a trade with your probability and reasoning.
110 **log add --ticker TICKER --side no --price 70 --contracts 5 --my-prob 20 --paper**
A practice trade that stays out of the scorecard.
111 **log settle**
Look up results and close every trade whose market has resolved.
112 **log sold --id 7 --exit-price 71**
Record selling a position before it settled.
113 **log stats --deposits 500**
The scorecard: profit, win rate, calibration, the 100-trade test, milestones and stops.
114 **log --file ~/kalshi/2026.csv stats --json**
A different log file, with the scorecard as JSON.
115 **log fills --out fills_2026.csv**
Download your raw fills from Kalshi for tax records. Needs your API key.

OUTPUT
116 **top -c weather -n 20 --format markdown --out weather.md**
Any list as a Markdown table in a file. Also csv and json.
117 **picks -n 10 --format csv --out picks.csv**
Picks as a spreadsheet.
118 **analyze 1 --format json**
Statistics and price history as JSON for another program.
119 **--color never top --category economics**
Plain text with no color codes. Color also switches off when you pipe to a file.
120 **serve --port 9000**
The dashboard on a different port.
121 **firehose --theme light --out report.pdf**
The everything-report on a white background, for printing.
122 **--refresh firehose --ticker KXFEDDECISION-26OCT-H0 --my-prob 92 --bankroll 500 --open**
Fresh prices, a market of your choosing, and your own probability in the plan.

A row number from the last list works anywhere a ticker does. Add -h to any command for its options.
