IN PLAIN WORDS

- Sports is 86% of all trading in the last 24 hours, with 78,013 open markets.
- After that, the busiest are Elections, Crypto, Climate and Weather.
- 5 categories traded fewer than 1,000 contracts today. Thin markets are hard to get in and out of.
- Volume shows where prices are most reliable and fills are easiest, not where the best bets are.

IN PLAIN WORDS
- 8 markets across 1 category: Politics.
- The typical price is 3.8c (range 2.3c to 87c). 7 cost under 15c, which the guide treats as longshots.
- 133.2k contracts traded in 24 hours; 25% of that is in "Blue wave in 2026? [Will Democrats hold 218 or m".
- 1 closes within 24 hours. Those may already be all but decided.
- Biggest move since yesterday: -3.3c on "Which leaders will leave office in 2026? [Vladim".
- The typical bid-ask gap is 1c. Gaps this tight mean buying costs the taker fee.

IN PLAIN WORDS

- 2 price sets break arithmetic after fees. The largest is worth 0.9c per set on paper.
- On paper is the catch: these are usually a few contracts deep and gone in seconds. Check the size with `show`.
- 2 markets moved at least 2.5 times their normal day. A move that big usually means news; read it before assuming the market overreacted.
- Prices here come from the saved list. Put --refresh before the command for a fresh one.

Next: **show 1** **analyze 1 --deep** **event EVENT_TICKER** (row numbers work)

(prices as of 1 min ago; add --refresh before the command for live prices, or use `show TICKER`)

Chance every pick wins: 34%. One loss at these prices can wipe out several wins.

READ THIS
EST is the price plus a small nudge for a known pricing pattern. It is an assumption, not a forecast.
If the market price is simply right, the average result is zero or a little worse, as the table shows.
These are candidates to research. The guide's rule still stands: trade only when YOUR number
differs from the price by 5 points or more. "limit" orders may never fill.

Next: **show 1** **analyze 1** **brief 1** **plan 1 --my-prob N** **buy 1** (a dry run until you add --live)

(prices as of 1 min ago; add --refresh before the command for live prices, or use `show TICKER`)

	KXYTVIEWSW-MOR26OCT11-5.5M Entertainment https://kalshi.com/markets/kxytviewsw/x/kxytviewsw-mor26oct11					

The chain runs out at $13.07 after 6 wins, short of $40. It takes about 2d to play out.

STAKING PLANS 20,000 simulated runs of this chain, aiming for $13.07

STAKE EACH STEP	REACH GOAL	END BELOW START	LOSE 75%+	AVERAGE END	TYPICAL END
100% of bankroll	75%	25%	25%	$9.93	$13.07 <- yours
50% of bankroll	0%	24%	0%	$9.99	$11.35
25% of bankroll	0%	24%	0%	$9.99	$10.54

IN PLAIN WORDS

- Each step wins about 95% of the time, but all 6 in a row happens only 76% of the time.
- Going from $10 to $13.07 is a 1.3x gain. At fair prices a 1.3x gain can succeed at most 77% of the time. Chaining favorites does not beat that; it only hides it.
- If the market prices are simply right, staking 100% ends at $9.35 on average, below the $10 you started with, because every step pays the taker fee.
- Smaller stakes survive a loss but reach the goal less often with this many steps. Pick the row whose worst case you can live with.
- This is the guide's high-price zone, where contracts have been slightly underpriced on average. That is a small edge, and one loss at these prices erases many wins.

Next: **show 1** **buy 1 --take** (dry run; --take because these fill at the ask)

KALSHI market detail

CPI in September [Above 0.6%]
KXCPI-26SEP-T0.6 Economics status active ends in **3d** (2026-10-14T12:25:00Z)
https://kalshi.com/markets/kxcpi/x/kxcpi-26sep

YES 18% NO 82%

SIDE	BID	ASK	PAYS	FEE	BREAK-EVEN
YES	16c	**20c**	5.00x	1.12c	needs to be **21.1%+** likely (market order)
NO	80c	**84c**	1.19x	0.94c	needs to be **84.9%+** likely (market order)

last trade **20c** (+4 since yesterday) spread 4c 24h volume **29.6k** open interest 124.8k

IN PLAIN WORDS
- The market puts YES at about 18%.
- $10 on YES at 20c buys 50 contracts and returns $50 if YES wins.
- The 4c gap leaves room to rest a limit order between the bid and the ask.
- Busy market: getting in and out should be easy.

RULES
If the Consumer Price Index (CPI) increases by more than 0.6% (single-decimal) in September 2026, then the market resolves to Yes.
The market will always close at 8:25 AM ET on the scheduled day of the data release (October 14, 2026). Please note: the Expiration Value is the single-decimal value published at the Source Agency. In the case of a delay in data caused by a federal government shutdown impacting the reliability of the Source Agency, the market's latest Expiration Date will be extended to the sooner of the release of the Underlying or six months after the end of the government shutdown.

CPI in September [Above 0.6%]
KXCPI-26SEP-T0.6 Economics ends in **3d** YES bid 16c / ask 20c
https://kalshi.com/markets/kxcpi/x/kxcpi-26sep

YES PRICE cents

STATISTICS

Start to now	16c to **17c**	**+1c**
Range	14c to 22c	average 17.6c now at 38% of the range
Typical move per day	2.7c	biggest -8c (Sep 29 23:00)
Trend	-0.01c per day	up 5 days, down 3, flat 5
Volume	95.4k total	6.8k per day last 3 days running at 26.3x the earlier pace
Open interest	22.6k to 99.1k	
Room to wander	about +/-5c over the 4 days left	(typical move x square root of time; a scale, not a forecast)

IN PLAIN WORDS

- The YES price has risen 1c over 14 days and sits in the middle of its range.
- It is moderately active: a typical day moves it 2.7c, and the biggest single move was -8c.
- Trading has picked up sharply lately (26.3x the earlier pace).
- Buying YES now at 20c only pays off if YES is at least 21.1% likely. A past trend says nothing about that.
- Against the guide: price is in the 60-95c band, closes within 30 days.

2026-10-10 18:25	bought YES	16c	59

IN PLAIN WORDS

- The YES price has risen 5.5c over 69 hours and sits in the middle of its range.
- It is moderately active: a typical hour moves it 1.7c, and the biggest single move was -5c.
- Trading has picked up sharply lately (9.0x the earlier pace).
- Buying YES now at 20c only pays off if YES is at least 21.1% likely. A past trend says nothing about that.
- In the last 100 trades, 15% of the volume was people buying YES and 85% buying NO.
- Resting orders lean neither way (46% of bid depth is on YES).
- Against the guide: price is in the 60-95c band, closes within 30 days.

Tickers: KXCPI-26SEP-T-0.4 KXCPI-26SEP-T-0.3 KXCPI-26SEP-T-0.2 KXCPI-26SEP-T-0.1 KXCPI-26SEP-T0.0 KXCPI-26SEP-T0.1 KXCPI-26SEP-T0.2 KXCPI-26SEP-T0.3 KXCPI-26SEP-T0.4 KXCPI-26SEP-T0.5 KXCPI-26SEP-T0.6 KXCPI-26SEP-T0.7 KXCPI-26SEP-T0.8 KXCPI-26SEP-T0.9

IN PLAIN WORDS
- The market's favorite is "Above -0.4%" at about 99%.
- Next is "Above -0.3%" at about 99%.
- 3 of the 14 outcomes are priced at 5c or less.

PS> **python kalshi_cli.py ladder KXCPI-26SEP**

KALSHI **implied distribution**

CPI in September Economics
https://kalshi.com/markets/kxcpi/x/kxcpi-26sep

OUTCOME	CHANCE
below 0	1.0%
0 to 0.1	0.0%
0.1 to 0.2	1.0%
0.2 to 0.3	0.0%
0.3 to 0.4	6.5%
0.4 to 0.5	27.5%
0.5 to 0.6	46.0%
0.6 to 0.7	17.0%
0.7 to 0.8	0.5%
0.8 to 0.9	0.0%
above 0.9	0.5%

Implied median **0.53** Implied average about 0.52

IN PLAIN WORDS
- The market's central guess is about 0.53: half the money says higher, half says lower.
- The single most likely outcome is "0.5 to 0.6" at 46%.
- The ladder is in order: every higher threshold is priced at or below the one before it.

2	**NO @ 81c**	limit	82%	**+1.0c**	+1.2%	-4.0c	5.3%	1.3%	8	$6.48
3	**NO @ 84c**	take	82%	**-2.9c**	-3.5%	-7.9c	0.0%	0.0%	0	$0.00
4	**YES @ 20c**	take	18%	**-3.1c**	-14.8%	-8.1c	0.0%	0.0%	0	$0.00

KELLY is the full Kelly share of bankroll. SIZE is 0.25 of that, capped at 3% of your $500 bankroll. "limit" may never fill.

CHECKLIST for option 1: YES @ 17c
FAIL edge of 5 points or more (yours: +1.0)
PASS price at 15c or more (this: 17c)
FAIL still positive if your probability is 5 points too confident
PASS resolves within 30 days (this: 3d)
PASS can be entered with a limit order, no fee
PASS enough trading to get filled (29.6k contracts in 24h)

VERDICT **SKIP** (4 of 6 checks pass)

IN PLAIN WORDS
- You think YES wins 18% of the time and can get in at 17c, so each contract is worth 1.0c more than it costs, if you are right.
- If your number is 5 points too confident, the edge becomes -4.0c. It depends on you being right.
- The suggested 8 contracts risk $1.36 to make $6.64, with an expected profit of $0.08.
- Everything here follows from YOUR probability. The script cannot tell you whether it is right.

Next: **buy KXCPI-26SEP-T0.6 --side yes --price 17 --count 8 --my-prob 18 --bankroll 500** (dry run; or just: buy 1)

PS> **python kalshi_cli.py buy 1 --take** dry run of the plan above; nothing is sent

KALSHI **buy order** **LIVE: real money**

Will CPI rise more than 0.6% in September 2026?
KXCPI-26SEP-T0.6 now: YES bid 16c / ask 20c

BUY 8 YES @ 17c limit order, good till cancelled
cost **$1.36** fee $0.00 while it rests pays **$8.00** if YES wins max loss $1.36
WARNING No --my-prob given, so your edge was not checked.

DRY RUN Nothing was sent. This is what --live would send:
POST /portfolio/events/orders {"ticker": "KXCPI-26SEP-T0.6", "side": "bid", "count": "8", "price": "0.1700", "time_in_force": "good_till_canceled", "self_trade_prevention_type": "taker_at_cross"}
(Kalshi quotes every order on the YES side: "bid" buys YES, "ask" sells YES; NO at P is YES at 100 - P.)

(row 1 of the last list = KXCPI-26SEP-T0.6)

PS> **python kalshi_cli.py brief KXCPI-26SEP-T0.6**

I am deciding whether to trade a prediction market and I want an independent probability estimate.
Today is October 10, 2026. Please search for current information; do not rely on memory for anything recent.

THE QUESTION
CPI in September [Above 0.6%]

HOW IT RESOLVES (these exact rules decide the outcome, so read them literally)
If the Consumer Price Index (CPI) increases by more than 0.6% (single-decimal) in September 2026, then the market resolves to Yes.
The market will always close at 8:25 AM ET on the scheduled day of the data release (October 14, 2026). Please note: the Expiratio
n Value is the single-decimal value published at the Source Agency. In the case of a delay in data caused by a federal government
shutdown impacting the reliability of the Source Agency, the market’s latest Expiration Date will be extended to the sooner of the
 release of the Underlying or six months after the end of the government shutdown.
Resolution sources: Bureau of Labor Statistics (https://www.bls.gov/cpi/)
The market closes 2026-10-14T12:25:00Z (in 3d).

WHAT I NEED FROM YOU
1. Restate in one sentence exactly what has to happen for this to resolve YES, including any deadline or
   threshold. Point out anything in the rules that could make it resolve differently from the headline.
2. The base rate: how often has this kind of thing happened in comparable past cases? Say which cases.
3. The current evidence for and against, each item with its source and date. Prefer primary sources.
4. Your probability that this resolves YES, as a single number, plus a range you are 80% sure contains
   the truth. Show how you got from the base rate to that number.
5. What specific news between now and the close would move your number by 10 points or more?
6. How confident you are in the estimate itself, and what you could not find out.

Form your own estimate from the evidence BEFORE reading the next section.

FOR COMPARISON ONLY
The market currently prices YES at about 16c bid / 20c ask.
Over the last 14 days the YES price went from 16c to 17c (low 14c, high 22c).
After giving your estimate, say whether you disagree with the market by 5 points or more and, if so, the
single strongest reason the market could be right and you wrong.

Market page: https://kalshi.com/markets/kxcpi/x/kxcpi-26sep

When you have a number: python kalshi_cli.py plan KXCPI-26SEP-T0.6 --my-prob NUMBER --bankroll YOUR_BANKROLL

```
PS> python kalshi_cli.py fee --price 18 --contracts 100
```

KALSHI fee calculator

100 contracts at 18c cost **$18.00**
market order fee **$1.04** (5.78% of cost) break-even: true odds of **19.04%+**
limit order fee **$0.00** on most markets (about a quarter of the market-order fee on some)

PS> **python kalshi_cli.py watchlist**

KALSHI **watchlist: 1 market(s)**

#	YES b/a	ADDED AT	SINCE	ENDS	MARKET
1	84/85	84.5c	+0.0c	17d	**Will the Federal Reserve Hike rates by 0bps at their October**
	KXFEDDECISION-26OCT-H0	note: wait for CPI			

PS> **python kalshi_cli.py log stats**

KALSHI **scorecard** trade_log.csv

Profit after fees	**+$2.22**	this month **+$0.22**	fees paid $0.08
Return on stake	**+13.5%**	staked $16.50	
Trades	**2 closed**	0 open ($0.00 at risk)	
Win rate	**100.0%** (1/1)	average price paid 80.0c	ahead by 20.0 pts
Calibration	you **0.0100**	market 0.0400 (lower is better)	you are beating the market's prices
Rule slips	**0**	0 market orders, 0 over 3% size, 0 under 5-pt edge (of 2 trades)	

100-TRADE TEST

2/100 **IN PROGRESS**

MILESTONES

$1,000		0.2%
$5,000		0.0%
$10,000		0.0%
$25,000		0.0%

BY NICHE

econ	1 trades	**+$2.00**
(none)	1 trades	**+$0.22**

STOPS

Not checked. Pass --deposits AMOUNT to check the monthly stop and hard stop.

IN PLAIN WORDS

- You are up $2.22 after fees on 2 closed trades, with 98 to go before the 100-trade test means anything.
- You won 100% of the time while paying 80c on average. That gap is where the profit comes from.
- Your probabilities have been closer to what happened than the market's prices were. That is the real sign of an edge.
- With fewer than 30 trades, all of this can still be chance.
- Best niche so far: econ. Weakest: (none).

PS> **python kalshi_cli.py examples**

KALSHI **80 example commands** run each as: python kalshi_cli.py <command>

START HERE

1 **examples**
This list. Add --search WORD to filter it.

2 **categories**
Every category with open markets, counts, and its share of today's volume.

3 **daily**
The morning run-through: watchlist, anomalies, top picks and your scorecard in one go.

4 **serve**
Open the dashboard at http://127.0.0.1:8765. Same commands, same output, with buttons.

5 **firehose --open**
Run EVERY command and bind the output into one color PDF with clickable contents, then open it.

6 **--refresh categories**
Put --refresh before any command to re-download the market list instead of using the saved copy.

FIND MARKETS

7 **top --category economics --top 10**
The 10 most traded economics markets in the last 24 hours.

8 **top --all --top 100**
The 100 busiest markets on the whole exchange.

9 **top --all --under 10 --top 20**
The 20 busiest contracts costing 10 cents or less. Longshots; the guide says to skip them.

10 **top --category politics elections --over 85 --top 15**
Heavy favorites (85 cents and up) in two categories at once.

11 **top --search fed rate --top 5**
Keyword search. A market must contain every word.

12 **top --search bitcoin ethereum --any-word --exclude daily**
Match either word, and drop anything containing 'daily'.

13 **top --skip-category sports crypto --top 20**
The busiest markets outside sports and crypto.

14 **top --preset movers --min-volume-24h 5000**
Biggest price changes since yesterday, in markets that actually trade.

15 **top --preset closing-soon --category weather**
Weather markets that resolve within two days.

16 **top --preset wide --top 10**
Bid-ask gaps of 5 to 20 cents with real volume: room to rest a limit order.

17 **top --preset guide --top 10**
Markets that fit the guide: 60 to 95 cents, resolving within 30 days, active.

18 **top --side no --min-price 60 --max-price 80 --closes-within 7**
NO contracts priced 60 to 80 cents that resolve this week.

19 **top --category tech ai --sort interest --one-per-event**
Tech and AI ranked by open interest, one market per event.

20 **top --series KXFED --sort closing**
Every market in one series, soonest first.
21 **top --category economics --top 3 --open 3**
Show the top 3 and open each one's kalshi.com page in your browser.

LOOK CLOSER
22 **show KXFEDDECISION-26OCT-H0**
One market live: both sides, fee, break-even, rules and the order book.
23 **show 2**
The same for row 2 of whatever list you printed last. Row numbers work everywhere.
24 **show 2 --full-rules**
Include the secondary rules text. Read it before trading anything.
25 **event KXFEDDECISION-26OCT**
Every outcome in one event, with the prices added up.
26 **ladder KXFEDDECISION-26OCT**
The event as a probability distribution: fair odds with the margin removed, or the implied median for a threshold ladder.
27 **analyze KXFEDDECISION-26OCT-H0**
Fourteen days of price history as a chart, with range, typical move, trend and volume.
28 **analyze 1 --interval hour --days 3**
The same at hourly resolution for the last three days.
29 **analyze 1 --deep**
Drill all the way down: adds the order book depth and the last 15 trades with who was buying.
30 **analyze 1 --trades 40 --book**
Pick the drill-downs yourself: the last 40 trades and the book.
31 **watch KXFEDDECISION-26OCT-H0 --every 30**
Re-check every 30 seconds and print a line when the price moves. Ctrl+C stops it.
32 **open 1**
Open row 1's page on kalshi.com.

FIND AN EDGE
33 **anomalies**
Scan everything for prices that break arithmetic or break their own pattern.
34 **anomalies --type overround ladder**
Only the arithmetic breaks: outcome sets and threshold ladders that guarantee a profit on paper.
35 **anomalies --type move --checks 40**
Moves measured against each market's own normal day, checking the 40 biggest movers.
36 **anomalies --category economics weather --top 10**
Limit the scan to two categories and show 10 per section.
37 **--refresh anomalies --type surge dislocation**
Fresh prices, then volume surges and quotes that have left the last trade behind.
38 **best**
The single top-scoring market after the guide's screen.
39 **best 3**
The top three by score. Also: best 5, best 10.
40 **best 5 --category economics weather --bankroll 2500**
Top five inside two categories, sized for a $2,500 bankroll.

41 **best 5 --by odds**
The five with the best odds of winning, instead of the best score. Small payouts, high hit rate.
42 **best 5 --by soonest --closes-within 2**
The five that resolve first, so the money comes back quickly.
43 **grind --start 10 --target 40**
Chain likely winners to compound $10 toward $40, with the real odds of the whole chain.
44 **grind --start 10 --target 16 --stake 50 --closes-within 2**
A shorter climb, risking half the bankroll per step instead of all of it.
45 **grind --start 25 --target 100 --min-price 90 --skip-category**
Only 90c-and-up favorites, with sports and crypto included.
46 **picks --top 10 --bankroll 500**
Ten picks as a weighted random draw from the best 60, one per event, with basket odds.
47 **picks --top 5 --seed 7**
Fix the random draw so the same five come back.
48 **picks --top 5 --bias 0**
Turn the pricing-pattern adjustment off: what the picks look like if the market is simply right.
49 **picks --top 8 --closes-within 3 --min-volume-24h 5000**
Only liquid markets that resolve within three days.

DECIDE
50 **brief KXFEDDECISION-26OCT-H0 --copy**
Write a research prompt for an AI assistant and copy it to the clipboard. Paste it, get a probability back.
51 **brief 1 --out research.txt**
Save the research prompt to a file instead.
52 **plan KXFEDDECISION-26OCT-H0 --my-prob 92 --bankroll 500**
Your probability in, edge, expected value, Kelly size, checklist and verdict out.
53 **plan 1 --my-prob 30 --bankroll 2500 --kelly 0.5 --max-risk 2**
Half Kelly instead of a quarter, capped at 2% of bankroll.
54 **fee --price 55 --contracts 100**
What a market order would cost in fees, and the break-even it implies.
55 **watchlist add KXFEDDECISION-26OCT-H0 --note "wait for CPI"**
Remember a market and the price you first saw.
56 **watchlist**
Your saved markets with live prices and the move since you added each.

TRADE
57 **buy 1**
After plan or picks: preview the suggested order for row 1. A dry run; nothing is sent.
58 **buy KXFEDDECISION-26OCT-H0 --side yes --price 83 --count 10 --my-prob 92 --bankroll 500**
Preview a specific limit order with the edge and sizing checks.
59 **buy 1 --spend 15**
Size by dollars instead of contracts.
60 **buy 1 --live**
Send it for real. Asks you to type BUY first. Needs your API key.
61 **--demo buy 1 --live**
The same against Kalshi's practice exchange, with practice money and a demo key.

62 **orders**
Orders still resting on the book.
63 **cancel ORDER_ID --live**
Cancel one resting order. Without --live it only shows what it would do.
64 **positions**
Cash balance and what you hold, with what each would fetch now.
65 **sell 1 --side yes --count 5 --price 66**
Preview selling 5 contracts of row 1 from positions. Checked against what you hold.

KEEP SCORE
66 **log init**
Create the trade log (trade_log.csv, or the path in KALSHI_LOG).
67 **log add --ticker KXFEDDECISION-26OCT-H0 --side yes --price 83 --contracts 10 --my-prob 92 --bankroll 500 --niche econ --rules-read --thesis "no hike signalled"**
Record a trade with your probability and reasoning.
68 **log add --ticker TICKER --side no --price 70 --contracts 5 --my-prob 20 --paper**
A practice trade that stays out of the scorecard.
69 **log settle**
Look up results and close every trade whose market has resolved.
70 **log sold --id 7 --exit-price 71**
Record selling a position before it settled.
71 **log stats --deposits 500**
The scorecard: profit, win rate, calibration, the 100-trade test, milestones and stops.
72 **log --file ~/kalshi/2026.csv stats --json**
A different log file, with the scorecard as JSON.
73 **log fills --out fills_2026.csv**
Download your raw fills from Kalshi for tax records. Needs your API key.

OUTPUT
74 **top -c weather -n 20 --format markdown --out weather.md**
Any list as a Markdown table in a file. Also csv and json.
75 **picks -n 10 --format csv --out picks.csv**
Picks as a spreadsheet.
76 **analyze 1 --format json**
Statistics and price history as JSON for another program.
77 **--color never top --category economics**
Plain text with no color codes. Color also switches off when you pipe to a file.
78 **serve --port 9000**
The dashboard on a different port.
79 **firehose --theme light --out report.pdf**
The everything-report on a white background, for printing.
80 **--refresh firehose --ticker KXFEDDECISION-26OCT-H0 --my-prob 92 --bankroll 500 --open**
Fresh prices, a market of your choosing, and your own probability in the plan.

A row number from the last list works anywhere a ticker does. Add -h to any command for its options.
