IN PLAIN WORDS
- Sports is 88% of all trading in the last 24 hours, with 76,134 open markets.
- After that, the busiest are Elections, Crypto, Climate and Weather.
- 5 categories traded fewer than 1,000 contracts today. Thin markets are hard to get in and out of.
- Volume shows where prices are most reliable and fills are easiest, not where the best bets are.

IN PLAIN WORDS
- 15 markets across 2 categories; 14 are Sports.
- The typical price is 42c (range 1c to 97c). 5 cost under 15c, which the guide treats as longshots.
- 48.8m contracts traded in 24 hours; 17% of that is in "Texas vs Oklahoma [Oklahoma]".
- Biggest move since yesterday: -73c on "Virginia Tech vs California [Virginia Tech]".
- The typical bid-ask gap is 1c. Gaps this tight mean buying costs the taker fee.

Chance every pick wins: 53%. One loss at these prices can wipe out several wins.

READ THIS
EST is the price plus a small nudge for a known pricing pattern. It is an assumption, not a forecast.
If the market price is simply right, the average result is zero or a little worse, as the table shows.
These are candidates to research. The guide's rule still stands: trade only when YOUR number
differs from the price by 5 points or more. "limit" orders may never fill.

Next: **show 1** **analyze 1** **brief 1** **plan 1 --my-prob N** **buy 1** (a dry run until you add --live)

The chain runs out at $13.06 after 6 wins, short of $40. It takes about 2d to play out.

STAKING PLANS 20,000 simulated runs of this chain, aiming for $13.06

STAKE EACH STEP	REACH GOAL	END BELOW START	LOSE 75%+	AVERAGE END	TYPICAL END	
100% of bankroll	76%	24%	24%	$9.98	$13.06	<- yours
50% of bankroll	0%	24%	0%	$10.01	$11.35	
25% of bankroll	0%	24%	0%	$10.00	$10.54	

IN PLAIN WORDS

- Each step wins about 96% of the time, but all 6 in a row happens only 76% of the time.
- Going from $10 to $13.06 is a 1.3x gain. At fair prices a 1.3x gain can succeed at most 77% of the time. Chaining favorites does not beat that; it only hides it.
- If the market prices are simply right, staking 100% ends at $9.38 on average, below the $10 you started with, because every step pays the taker fee.
- Smaller stakes survive a loss but reach the goal less often with this many steps. Pick the row whose worst case you can live with.
- This is the guide's high-price zone, where contracts have been slightly underpriced on average. That is a small edge, and one loss at these prices erases many wins.

IN PLAIN WORDS
- A 2x means risking $10 to get $20.00. If prices are fair that works 50% of the time, and fails the other 50%, whichever route is used.
- Highest estimated chance here: chain, about 47%. The differences between routes are small and come from the price-bias assumption, not from knowing the outcomes.
- The chain has the likeliest individual bets, but one miss ends it. Later legs are sized from today's prices and will have moved by the time you get there, so re-run before each one.
- The spread assumes its markets are unrelated. If they hang on the same news they win or lose together, and the real chance is lower than shown.
- AVG RESULT is the average gain or loss per attempt under the tool's estimate. Under plain market prices it is always a small loss, because every route pays the taker fee.

  IN PLAIN WORDS
  - A 10x means risking $100 to get $1,000.00. If prices are fair that works 10% of the time, and fails the other 90%, whichever
route is used.
  - Highest estimated chance here: chain, about 7%. The differences between routes are small and come from the price-bias
assumption, not from knowing the outcomes.
  - The chain has the likeliest individual bets, but one miss ends it. Later legs are sized from today's prices and will have
moved by the time you get there, so re-run before each one.
```

- The spread assumes its markets are unrelated. If they hang on the same news they win or lose together, and the real chance is lower than shown.
- Some of these are under 15 cents. That is the guide's longshot zone, where buyers have lost the most on average.
- These need up to 1,117 contracts at the ask. Check there is that much for sale with `analyze N --deep` before sending anything.
- AVG RESULT is the average gain or loss per attempt under the tool's estimate. Under plain market prices it is always a small loss, because every route pays the taker fee.

BASKET 5 positions, $48.71 at risk (9.7% of a $500 bankroll, 2% each)

IF...	CHANCE UP	AVERAGE	TYPICAL	BAD 5%	GOOD 5%
the bias pattern holds (EST)	40%	+$0.58	-$1.71	-$13.71	+$10.29
the market price is right (MKT)	38%	-$0.13	-$1.71	-$13.71	+$10.29

Chance every pick wins: 41%. One loss at these prices can wipe out several wins.

READ THIS
EST is the price plus a small nudge for a known pricing pattern. It is an assumption, not a forecast.
If the market price is simply right, the average result is zero or a little worse, as the table shows.
These are candidates to research. The guide's rule still stands: trade only when YOUR number
differs from the price by 5 points or more. "limit" orders may never fill.

Next: **show 1** **analyze 1** **brief 1** **plan 1 --my-prob N** **buy 1** (a dry run until you add --live)

(prices as of 7 min ago; add --refresh before the command for live prices, or use `show TICKER`)

KALSHI market detail

OpenAI market share this week [Above 18.1%]
KXOPENSHARE-26OCT12-18.1 Science and Technology status active ends in **38h** (2026-10-12T14:00:00Z)
https://kalshi.com/markets/kxopenshare/x/kxopenshare-26oct12

YES 84% NO 16%

SIDE	BID	ASK	PAYS	FEE	BREAK-EVEN
YES	82c	**85c**	1.18x	0.89c	needs to be **85.9%+** likely (market order)
NO	15c	**18c**	5.56x	1.03c	needs to be **19.0%+** likely (market order)

last trade **82c** (-1 since yesterday) spread 3c 24h volume **52.0k** open interest 26.4k

IN PLAIN WORDS
- The market puts YES at about 84%.
- $10 on YES at 85c buys 11 contracts and returns $11 if YES wins.
- The 3c gap leaves room to rest a limit order between the bid and the ask.
- Busy market: getting in and out should be easy.

RULES
If OpenAI scores above 18.1% on OpenRouter text market share by model author week of Oct 5, 2026, then the market resolves to Yes.
This event will resolve based on 10:00AM ET Monday updated market share values reported by OpenRouter, rounded to one decimal place, for the week of Oct 5, 2026.

If the named model author’s market share is not separately identified in the source chart, including if it is included in “Others,” all markets in the event will resolve to No.

Kalshi is not affiliated, associated, authorized, endorsed by, or in any way officially connected with the governing benchmark. All trademarks, logos, and brand names are the property of their respective owners.

https://kalshi.com/markets/kxopenshare/x/kxopenshare-26oct12

YES PRICE cents

STATISTICS

Start to now	43c to **59c**	**+16c**
Range	13c to 87c	average 49.6c now at 62% of the range
Typical move per day	46.4c	biggest -74c (Oct 07 23:00)
Trend	-0.90c per day	up 3 days, down 1, flat 0
Volume	143.4k total	28.7k per day last 3 days running at 4.1x the earlier pace
Open interest	3.1k to 22.4k	
Room to wander	about +/-59c over the 2 days left	(typical move x square root of time; a scale, not a forecast)

IN PLAIN WORDS

- The YES price has risen 16c over 5 days and sits in the middle of its range.
- It is jumpy: a typical day moves it 46.4c, and the biggest single move was -74c.
- Trading has picked up sharply lately (4.1x the earlier pace).
- Buying YES now at 85c only pays off if YES is at least 85.9% likely. A past trend says nothing about that.
- Against the guide: price is in the 60-95c band, closes within 30 days.

Tickers: KXOPENSHARE-26OCT12-14.1 KXOPENSHARE-26OCT12-16.5 KXOPENSHARE-26OCT12-17.5 KXOPENSHARE-26OCT12-17.8 KXOPENSHARE-26OCT12-18.1 KXOPENSHARE-26OCT12-18.4 KXOPENSHARE-26OCT12-18.7 KXOPENSHARE-26OCT12-19.8 KXOPENSHARE-26OCT12-21.9

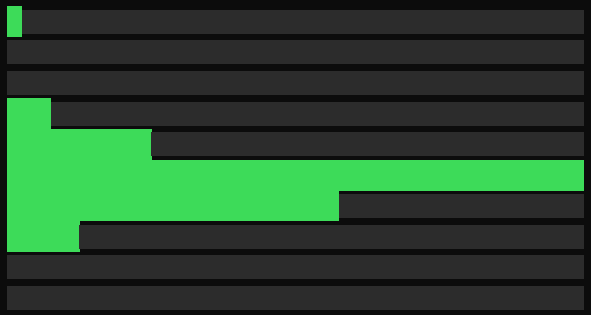

IN PLAIN WORDS
- The market's favorite is "Above 14.1%" at about 99%.
- Next is "Above 16.5%" at about 99%.
- 2 of the 9 outcomes are priced at 5c or less.

PS> **python kalshi_cli.py ladder KXOPENSHARE-26OCT12**

KALSHI **implied distribution**

OpenAI market share this week Science and Technology
https://kalshi.com/markets/kxopenshare/x/kxopenshare-26oct12

OUTCOME	CHANCE
below 14.1	1.0%
14.1 to 16.5	0.5%
16.5 to 17.5	-0.5%
17.5 to 17.8	3.5%
17.8 to 18.1	12.0%
18.1 to 18.4	48.5%
18.4 to 18.7	28.0%
18.7 to 19.8	6.5%
19.8 to 21.9	0.0%
above 21.9	0.5%

Implied median **18.31** Implied average about 18.39

IN PLAIN WORDS
- The market's central guess is about 18.31: half the money says higher, half says lower.
- The single most likely outcome is "18.1 to 18.4" at 48%.
- The ladder is in order: every higher threshold is priced at or below the one before it.

Next: **event KXOPENSHARE-26OCT12** **show 1**

PS> **python kalshi_cli.py plan KXOPENSHARE-26OCT12-18.1 --my-prob 84 --bankroll 500** no --my-prob given, so this uses the market's own price: expect no edge

KALSHI **trade plan**

OpenAI market share this week [Above 18.1%]
KXOPENSHARE-26OCT12-18.1 Science and Technology ends in **38h**
your probability of YES: **84%** market: YES 52/85c NO 15/48c

#	ORDER	HOW	WIN %	EDGE	RETURN	IF 5 OFF	KELLY	SIZE	CONTRACTS	COST
1	**YES @ 53c**	limit	84%	**+31.0c**	+58.5%	+26.0c	66.0%	3.0%	28	$14.84
2	**NO @ 16c**	limit	16%	**+0.0c**	+0.0%	-5.0c	0.0%	0.0%	0	$0.00
3	**YES @ 85c**	take	84%	**-1.9c**	-2.2%	-6.9c	0.0%	0.0%	0	$0.00
4	**NO @ 48c**	take	16%	**-33.7c**	-67.8%	-38.7c	0.0%	0.0%	0	$0.00

KELLY is the full Kelly share of bankroll. SIZE is 0.25 of that, capped at 3% of your $500 bankroll. "limit" may never fill.

CHECKLIST for option 1: YES @ 53c
PASS edge of 5 points or more (yours: +31.0)
PASS price at 15c or more (this: 53c)
PASS still positive if your probability is 5 points too confident
PASS resolves within 30 days (this: 38h)
PASS can be entered with a limit order, no fee
PASS enough trading to get filled (52.0k contracts in 24h)

VERDICT **WORTH PLACING** (6 of 6 checks pass)

IN PLAIN WORDS
- You think YES wins 84% of the time and can get in at 53c, so each contract is worth 31.0c more than it costs, if you are right.
- If your number is 5 points too confident, the edge becomes +26.0c. It survives being somewhat wrong.
- The suggested 28 contracts risk $14.84 to make $13.16, with an expected profit of $8.68.
- Everything here follows from YOUR probability. The script cannot tell you whether it is right.

Next: **buy KXOPENSHARE-26OCT12-18.1 --side yes --price 53 --count 28 --my-prob 84 --bankroll 500** (dry run; or just: buy 1)

KXOPENSHARE-26OCT12-18.1 now: YES bid 52c / ask 85c

BUY 28 YES @ 53c limit order, good till cancelled
cost **$14.84** fee $0.00 while it rests pays **$28.00** if YES wins max loss $14.84
WARNING No --my-prob given, so your edge was not checked.

DRY RUN Nothing was sent. This is what --live would send:
POST /portfolio/events/orders {"ticker": "KXOPENSHARE-26OCT12-18.1", "side": "bid", "count": "28", "price": "0.5300", "time_in_force": "good_till_canceled", "self_trade_prevention_type": "taker_at_cross"}
(Kalshi quotes every order on the YES side: "bid" buys YES, "ask" sells YES; NO at P is YES at 100 - P.)

(row 1 of the last list = KXOPENSHARE-26OCT12-18.1)

PS> **python kalshi_cli.py brief KXOPENSHARE-26OCT12-18.1**

I am deciding whether to trade a prediction market and I want an independent probability estimate.
Today is October 10, 2026. Please search for current information; do not rely on memory for anything recent.

THE QUESTION
OpenAI market share this week [Above 18.1%]

HOW IT RESOLVES (these exact rules decide the outcome, so read them literally)
If OpenAI scores above 18.1% on OpenRouter text market share by model author week of Oct 5, 2026, then the market resolves to Yes.
This event will resolve based on 10:00AM ET Monday updated market share values reported by OpenRouter, rounded to one decimal place, for the week of Oct 5, 2026.

If the named model author’s market share is not separately identified in the source chart, including if it is included in “Others,” all markets in the event will resolve to No.

Kalshi is not affiliated, associated, authorized, endorsed by, or in any way officially connected with the governing benchmark.
All trademarks, logos, and brand names are the property of their respective owners.
Resolution sources: OpenRouter - AI Market Share (https://openrouter.ai/rankings#market-share)
The market closes 2026-10-12T14:00:00Z (in 38h).

WHAT I NEED FROM YOU
1. Restate in one sentence exactly what has to happen for this to resolve YES, including any deadline or threshold. Point out anything in the rules that could make it resolve differently from the headline.
2. The base rate: how often has this kind of thing happened in comparable past cases? Say which cases.
3. The current evidence for and against, each item with its source and date. Prefer primary sources.
4. Your probability that this resolves YES, as a single number, plus a range you are 80% sure contains the truth. Show how you got from the base rate to that number.
5. What specific news between now and the close would move your number by 10 points or more?
6. How confident you are in the estimate itself, and what you could not find out.

Form your own estimate from the evidence BEFORE reading the next section.

FOR COMPARISON ONLY
The market currently prices YES at about 52c bid / 85c ask.
Over the last 5 days the YES price went from 43c to 59c (low 13c, high 87c).
After giving your estimate, say whether you disagree with the market by 5 points or more and, if so, the single strongest reason the market could be right and you wrong.

The event as a probability distribution: fair odds with the margin removed, or the implied median for a threshold ladder.
27 **analyze KXFEDDECISION-26OCT-H0**
Fourteen days of price history as a chart, with range, typical move, trend and volume.
28 **analyze 1 --interval hour --days 3**
The same at hourly resolution for the last three days.
29 **analyze 1 --deep**
Drill all the way down: adds the order book depth and the last 15 trades with who was buying.
30 **analyze 1 --trades 40 --book**
Pick the drill-downs yourself: the last 40 trades and the book.
31 **watch KXFEDDECISION-26OCT-H0 --every 30**
Re-check every 30 seconds and print a line when the price moves. Ctrl+C stops it.
32 **open 1**
Open row 1's page on kalshi.com.

FIND AN EDGE
33 **anomalies**
Scan everything for prices that break arithmetic or break their own pattern.
34 **anomalies --type overround ladder**
Only the arithmetic breaks: outcome sets and threshold ladders that guarantee a profit on paper.
35 **anomalies --type move --checks 40**
Moves measured against each market's own normal day, checking the 40 biggest movers.
36 **anomalies --category economics weather --top 10**
Limit the scan to two categories and show 10 per section.
37 **--refresh anomalies --type surge dislocation**
Fresh prices, then volume surges and quotes that have left the last trade behind.
38 **best**
The single top-scoring market after the guide's screen.
39 **best 3**
The top three by score. Also: best 5, best 10.
40 **best 5 --category economics weather --bankroll 2500**
Top five inside two categories, sized for a $2,500 bankroll.

41 **best 5 --by odds**
The five with the best odds of winning, instead of the best score. Small payouts, high hit rate.
42 **best 5 --by soonest --closes-within 2**
The five that resolve first, so the money comes back quickly.
43 **grind --start 10 --target 40**
Chain likely winners to compound $10 toward $40, with the real odds of the whole chain.
44 **grind --start 10 --target 16 --stake 50 --closes-within 2**
A shorter climb, risking half the bankroll per step instead of all of it.
45 **grind --start 25 --target 100 --min-price 90 --skip-category**
Only 90c-and-up favorites, with sports and crypto included.
46 **multiply 2x --stake 10**
Ways to turn $10 into $20 within three days: one bet, a chain of bets, and a spread of bets, side by side with the odds of each.
47 **multiply 3x --stake 20**
The same for $20 into $60. The single bet is a contract near 33c; the chain is two or three likelier bets in a row.
48 **multiply 5x --stake 20 --days 5**
Aim for 5x and let the bets run up to five days out instead of the default three.
49 **multiply 10x --stake 100 --days 7**
$100 into $1,000 over the longest window allowed. Seven days is the ceiling; a bigger number is cut back to 7.
50 **multiply 5x --stake 10 --route single --top 10**
Only the one-bet route: the ten best contracts that pay 5x or a little more.
51 **multiply 3x --stake 20 --route multi --max-bets 4**
Only the several-bet routes, allowing up to four bets in the chain or the spread.
52 **multiply 2x --stake 100 --route chain --category weather economics**
A 2x built only from bets in a row, inside two categories.
53 **x 5x -s 20 -d 2 --format json --out multiply.json**
Short form of the command, with the bets written to a file for a spreadsheet or script.
54 **picks --top 10 --bankroll 500**
Ten picks as a weighted random draw from the best 60, one per event, with basket odds.
55 **picks --top 5 --seed 7**
Fix the random draw so the same five come back.
56 **picks --top 5 --bias 0**
Turn the pricing-pattern adjustment off: what the picks look like if the market is simply right.
57 **picks --top 8 --closes-within 3 --min-volume-24h 5000**
Only liquid markets that resolve within three days.

DECIDE
58 **brief KXFEDDECISION-26OCT-H0 --copy**
Write a research prompt for an AI assistant and copy it to the clipboard. Paste it, get a probability back.
59 **brief 1 --out research.txt**
Save the research prompt to a file instead.
60 **plan KXFEDDECISION-26OCT-H0 --my-prob 92 --bankroll 500**
Your probability in, edge, expected value, Kelly size, checklist and verdict out.
61 **plan 1 --my-prob 30 --bankroll 2500 --kelly 0.5 --max-risk 2**
Half Kelly instead of a quarter, capped at 2% of bankroll.
62 **fee --price 55 --contracts 100**

What a market order would cost in fees, and the break-even it implies.
63 **watchlist add KXFEDDECISION-26OCT-H0 --note "wait for CPI"**
Remember a market and the price you first saw.
64 **watchlist**
Your saved markets with live prices and the move since you added each.

TRADE
65 **buy 1**
After plan or picks: preview the suggested order for row 1. A dry run; nothing is sent.
66 **buy KXFEDDECISION-26OCT-H0 --side yes --price 83 --count 10 --my-prob 92 --bankroll 500**
Preview a specific limit order with the edge and sizing checks.
67 **buy 1 --spend 15**
Size by dollars instead of contracts.
68 **buy 1 --live**
Send it for real. Asks you to type BUY first. Needs your API key.
69 **--demo buy 1 --live**
The same against Kalshi's practice exchange, with practice money and a demo key.
70 **orders**
Orders still resting on the book.
71 **cancel ORDER_ID --live**
Cancel one resting order. Without --live it only shows what it would do.
72 **positions**
Cash balance and what you hold, with what each would fetch now.
73 **sell 1 --side yes --count 5 --price 66**
Preview selling 5 contracts of row 1 from positions. Checked against what you hold.

KEEP SCORE
74 **log init**
Create the trade log (trade_log.csv, or the path in KALSHI_LOG).
75 **log add --ticker KXFEDDECISION-26OCT-H0 --side yes --price 83 --contracts 10 --my-prob 92 --bankroll 500 --niche econ --rules-read --thesis "no hike signalled"**
Record a trade with your probability and reasoning.
76 **log add --ticker TICKER --side no --price 70 --contracts 5 --my-prob 20 --paper**
A practice trade that stays out of the scorecard.
77 **log settle**
Look up results and close every trade whose market has resolved.
78 **log sold --id 7 --exit-price 71**
Record selling a position before it settled.
79 **log stats --deposits 500**
The scorecard: profit, win rate, calibration, the 100-trade test, milestones and stops.
80 **log --file ~/kalshi/2026.csv stats --json**
A different log file, with the scorecard as JSON.
81 **log fills --out fills_2026.csv**
Download your raw fills from Kalshi for tax records. Needs your API key.

OUTPUT

82 **top -c weather -n 20 --format markdown --out weather.md**
Any list as a Markdown table in a file. Also csv and json.
83 **picks -n 10 --format csv --out picks.csv**
Picks as a spreadsheet.
84 **analyze 1 --format json**
Statistics and price history as JSON for another program.
85 **--color never top --category economics**
Plain text with no color codes. Color also switches off when you pipe to a file.
86 **serve --port 9000**
The dashboard on a different port.
87 **firehose --theme light --out report.pdf**
The everything-report on a white background, for printing.
88 **--refresh firehose --ticker KXFEDDECISION-26OCT-H0 --my-prob 92 --bankroll 500 --open**
Fresh prices, a market of your choosing, and your own probability in the plan.

A row number from the last list works anywhere a ticker does. Add -h to any command for its options.
